Microsoft 70-410 Exam and MCSA: Windows Server 2012 Certification: Important Notes

Our Friends · Tuesday, April 30th, 2019

Microsoft is one of the world-leading software providers, however, the company's activity is not limited to this area. There is also a wide credential program Microsoft offers for interested IT specialists. There are a few levels in this program: entry, associate, expert and developer. In this article, we will discuss one of the associate Microsoft certifications named MCSA: Windows Server 2012.

MCSA: Windows Server 2012 certification

This credential is intended for professionals who are willing to work with Windows Server 2012 and deliver more value for businesses. The certification qualifies you for the position of a network specialist or systems administrator. If you are aiming towards MCSA: Windows Server 2012 certification, then you have to clear three necessary exams: 70-410, 70-411 and 70-412. Below we will turn our attention to 70-410, the first exam in MCSA: Windows Server 2012 certification path and consider the details you should know to pass it.

Microsoft 70-410 exam

70-410 exam helps in testing the varied skills required for the installation and configuration of the Windows Server 2012 R2. The exam will help significantly in honing your knowledge as it focuses on the Server infrastructure as well.

Skills measured in MCSA 70-410 exam

The exam will comprise of the questions intended to test your knowledge in the following areas:

1. Installation of servers

This is an essential skill that you should have in order to get certified. To pass the exam, you need to know how to perform the following tasks:

- Server installation
- Server configuration
- The configuration of local storage

2. Configuration of the server features and roles

Certified professional should be able to handle the configuration of file access, share access, document services and print services. This section also includes setting up servers for remote controlling.

3. The configuration of Hyper-V

To clear his section, the candidate should know how to configure and create virtual networks, virtual machine settings and virtual machine storage.

4. Core network services: configuration and deployment

This part of the exam is dedicated to IPv6 and IPv4 addressing as well as deployment and configuration of DHCP service and DNS service.

5. Install and administer Active Directory

This section covers everything you need to know about Active Directory: how to set up domain controllers, manage and create AD computers and users and deal with AD organizational units and groups.

6. Create and manage Group Policy

To clear this part of the exam, you need to be proficient in the creation of Group Policy objects as well as the configuration of Windows Firewall and security policies.

Each of the above topics makes up about 15-20 percent of your total score. That's why it is essential to have a proper understanding of the necessary skills to pass 70-410 exam.

Exam structure

Microsoft does not disclose the precise details of the exam, however, we know that MCSA tests last for 120 minutes. There will be 40-60 questions in the exam. As practice shows, most of these questions are multiple-choice, but you can also encounter build list, case study, best answer, active screen, hot area, drag-and-drop and other types of questions. The exact percentage of the questions is also unknown.

To register and schedule your exam, you need to pay the fee of \$165 for the US (the price depends on your country of residence). The passing score for Microsoft exams is usually 700 out of the possible 1000 points.

Prerequisites for exam 70-410

As per Microsoft, you are required to have the essential knowledge in the field before taking 70-410 exam. You need to have at least one year of experience with the installation and configuration of the Windows Server 2012. This is not a compulsory requirement for attending the exam, but these skills will help you clear the exam with the proper marks.

Who should appear in MCSA 70-410 exam?

70-410 exam is just one of the three exams which are required to get a certification related to the Windows Server 2012. It is intended for specialists who want to boost their skills and advance their careers in the field of systems administration and computer networks.

By passing the exam, candidates will establish their ability to handle the implementation and configuration of the Windows Server 2012 core services, networking services and Active Directory. If you manage to pass this exam along with the other two, you will have the necessary skills and knowledge set for the implementation, maintenance, management and even for the provisioning Windows Server 2012 services.

Best preparation options

To prepare for MCSA 70-410 in the best way, you need to consider all the possible training options and choose one that suits you the best. Through a proper instructor-led training course, you can learn from the seasoned Microsoft experts. This will boost your confidence and bring your exam preparation to the next level. Enroll in a training course and enhance your chances of success in passing the exam. This will cost you some considerable amount of money, but it is definitely worth it.

You can also opt for the official study guides written by Microsoft specialists in order to help you to grasp all the necessary exam concepts. With these books, you will have all the material in your hands and be able to learn at your own pace. Books can also contain some practice questions you can solve to evaluate your readiness for the exam.

Conclusion

Well, now you know the details of 70-410 exam and we are sure that you are eager to start your exam preparation. Carefully choose training resources and allocate enough time to get ready for your exam. Upon completion of your MCSA certification, you can move further and try to attain expert-level MCSE: Core Infrastructure certification, so good luck!
